Provenance

Form D-VH

Detach and read these instructions before completing this form.

Make sure all applicable spaces have been filled in before you return this form.

BASIC INFORMATION

Form D-VH should be used for the registration of an original design of a vessel hull that makes the hull attractive or distinctive in appearance to the purchasing or using public. A vessel hull includes the design of a plug or mold used to manufacture the vessel hull.

Definition

A “vessel” is a craft designed to navigate on water, but does not include any such craft that exceeds 200 feet in length. A “hull” is the frame or body of a vessel, including the deck of a vessel, exclusive of masts, sails, yards, and rigging. A “plug” is a device or model used to make a mold for the purpose of exact duplication, regardless of whether the device or model has an intrinsic utilitarian function that is not only to portray the appearance of the product or to convey information. A “mold” is a matrix or form in which a substance for material is used, regardless of whether the matrix or form has an intrinsic utilitarian function that is not only to portray the appearance of the product or

**when we try to solve all the
problems at once, we overdo it.**

“Taking the "forklift upgrade" approach to networking, it specified eliminating all existing protocols and replacing them with new ones at all layers of the stack. This made implementation difficult, and was resisted by many vendors and users with significant investments in other network technologies. In addition, the protocols included so many optional features that many vendor's implementations were not interoperable.”

Abstract

HTML represents the worst of two worlds. We could have taken a formatting language and added hypertext anchors so that users had beautifully designed documents on their desktops. We could have developed a powerful document structure language so that browsers could automatically do intelligent things with Web documents. What we have got with HTML is ugly documents without formatting or structural information. I show that a standard modern novel cannot be rendered readable even in HTML level 3. I propose a document- and author-centered way of determining the simplest enhancements to HTML sufficient to capture the intent of the authors. I review Tom Malone's mid-1980's work on semistructured messages, which shows us how to add structure without sacrificing flexibility and generality. I describe how to add structure tags without breaking current Web browsers and HTTP servers. Finally, I discuss useful ideas that we can take from the [KQML agent-communication language](#).

SITUATION:
THERE ARE
14 COMPETING
STANDARDS.

14?! RIDICULOUS!
WE NEED TO DEVELOP
ONE UNIVERSAL STANDARD
THAT COVERS EVERYONE'S
USE CASES.

SOON:

SITUATION:
THERE ARE
15 COMPETING
STANDARDS.

Edsger Wybe Dijkstra

We know that a program must be correct and we can study it from that viewpoint only; we also know that it should be efficient and we can study its efficiency on another day, so to speak. In another mood we may ask ourselves whether, and if so: why, the program is desirable. **But nothing is gained --on the contrary!-- by tackling these various aspects simultaneously. It is what I sometimes have called "the separation of concerns", which, even if not perfectly possible, is yet the only available technique for effective ordering of one's thoughts, that I know of.** This is what I mean by "focusing one's attention upon some aspect": it does not mean ignoring the other aspects, it is just doing justice to the fact that from this aspect's point of view, the other is irrelevant. It is being one- and multiple-tracked minded simultaneously.

**treat content, data,
software, and privacy in
separate bins, but with an
eye towards forming a
stack.**

Attribution 3.0 Unported (CC BY 3.0)

This is a human-readable summary of the [Legal Code \(the full license\)](#).

Describing Copyright in RDF

Creative Commons Rights Expression Language

The Creative Commons Rights Expression Language (CC REL) lets you describe copyright licenses in RDF. For more information on describing licenses in RDF and attaching those descriptions to digital works, see [CC REL](#) in the [Creative Commons wiki](#).

Classes

Work

a potentially copyrightable work

License

a set of requests/permissions to users of a Work, e.g. a copyright license, the public domain, information for distributors

Jurisdiction

the legal jurisdiction of a license

Permission

an action that may or may not be allowed or desired

Requirement

```
<a rel="cc:attributionURL" href="http://example.org/crobp.html"
property="dc:title">Compact Representation of Blank Pages</a> by
<a rel="dc:creator" href="http://example.org/jr.html"
property="cc:attributionName">James Roberts</a>, a <a
rel="dc:source" href="http://example.org/bps.html">translation
of 'Paginas Blancos Si!</a>, is licensed to the public under
the <a rel="license"
href="http://creativecommons.org/licenses/by/2.5/">Creative
Commons Attribution 2.5 License</a>.
```

This produces the triples above plus these:

1. `<> dc:creator <http://example.org/jr.html> .`
2. `<> dc:source <http://example.org/bps.html> .`
3. `<> license <http://creativecommons.org/licenses/by/2.5/> .`

attribution (does not) = citation

Database right

From Wikipedia, the free encyclopedia

In [European Union law](#), **database rights** are specifically coded (i.e. *sui generis*) laws on the copying and dissemination of information in [computer databases](#). These rights were first introduced in 1996.

A **database right** is considered to be a [property right](#), comparable to but distinct from [copyright](#), that exists to recognise the investment that is made in compiling a database, even when this does not involve the 'creative' aspect that is reflected by copyright.^[1]

On 11 March 1996 the [Council](#) of the [European Union](#) passed [Directive No. 96/9/EC of 11 March 1996 on the legal protection of databases](#),^[2] giving specific and separate legal rights (and limitations) to certain computer records. The law calls these database rights.

Rights afforded to manual records under EU database rights laws are similar in format, but not identical, to those afforded artistic works.

Database rights last for 15 years. Each time a database is substantially modified, however, a new set of rights are created for that database. An owner has the right to object to the copying of substantial parts of their database, even if data is extracted and reconstructed piecemeal. Database rights under the EU are created automatically, vested in the employers of creators (when the action of creation was part of employment), and do not have to be registered to have effect.

“public genomic records”

these are the rights you are granting
to qualified researchers :

- ☒ Right to do research with my data
- ☒ Right to redistribute my data
- ☒ Right to publish the results of research from my data
- ☒ Right to commercialize products derived from research on my data

all boxes must be checked to move forward
in the consent process

Next

behaviors you can request of the
researchers who use your data

- ☒ Do not attempt to re-identify me.
- ☒ Share new data with others as I have shared with you.
- ☒ Share your research with the public under open access terms.

these are obligations we will impose on researchers
through terms of use. violators will not be allowed to
access the commons again.

The impact of Open Access
in research and scholarship

WHO SUPPORTS TAXPAYER ACCESS?

Open access policy

Position statement in support of open and unrestricted access to published research

The mission of the Wellcome Trust is to support the brightest minds in biomedical research and the medical humanities.

The main output of this research is new ideas and knowledge, which the Trust expects its researchers to publish in high-quality, peer-reviewed journals.

The Wellcome Trust believes that maximising the distribution of these papers - by providing free, online access - is the most effective way of ensuring that the research we fund can be accessed, read and built upon. In turn, this will foster a richer research culture.

The Wellcome Trust therefore supports unrestricted access to the published output of research as a fundamental part of its charitable mission and a public benefit to be encouraged wherever possible.

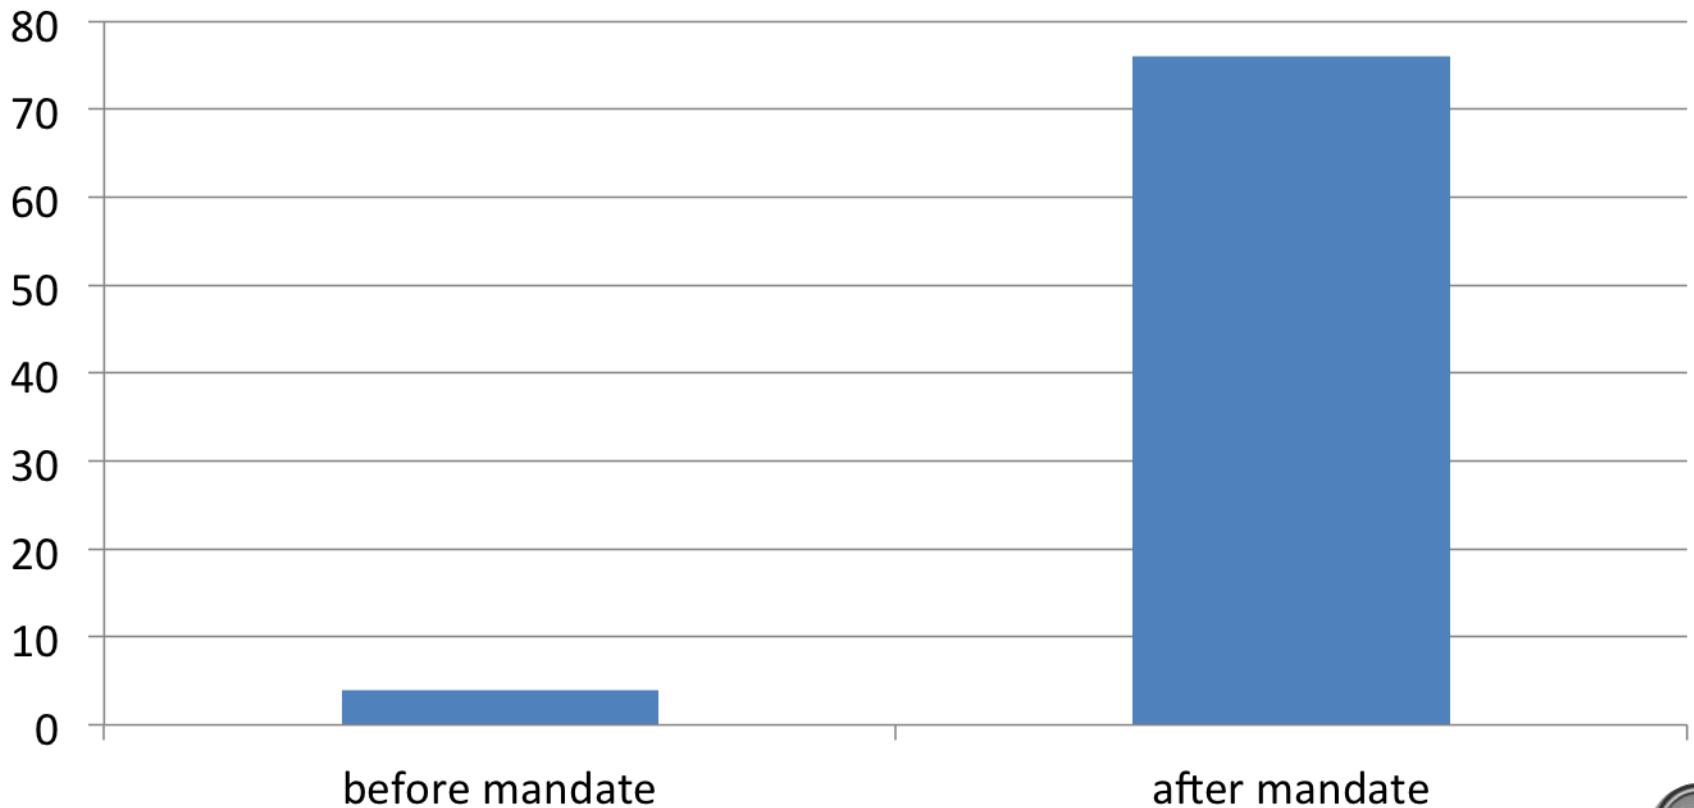

Specifically, the Wellcome Trust:

- expects authors of research papers to maximise the opportunities to make their results available for free
- requires electronic copies of any research papers that have been accepted for publication in a peer-reviewed journal, and are supported in whole or in part by Wellcome Trust funding, to be made available through PubMed Central (PMC) and UK PubMed Central (UKPMC) as soon as possible and in any event within six months of the journal publisher's official date of final publication
- will provide grantholders with additional funding, through their institutions, to cover open access charges, where appropriate, in order to meet the Trust's requirements
- encourages - and where it pays an open access fee, requires - authors and publishers to license research papers such that they may be freely copied and re-used (for example for text and data-mining purposes), provided that such uses are fully attributed
- affirms the principle that it is the intrinsic merit of the work, and not the title of the journal in which an author's work is published, that should be considered in making funding

nothing beats a funder mandate.

% of author compliance with NIH deposit

633 NSF Policy

633.1 Basic Policy

- a. It is NSF policy that grantees are entitled to reimbursement from grant funds for indirect costs except where specifically excluded by [GPM 633.2, "Exceptions to Basic Policy,"](#) or when the grantee waives entitlement to full reimbursement of indirect costs voluntarily. Also, some types of awarded indirect cost rates limit full recovery (i.e., maximum provisional rates).
- b. The awarded indirect cost rate is generally based upon a grantee's current Federally negotiated indirect cost rate agreement. When establishing an indirect rate for an award where the grantee does not have a current negotiated rate agreement, NSF will consider the rate proposed in the budget, the grantee's indirect cost proposal submission, the amount of total funding requested and other pertinent financial factors. Since some types of rates limit indirect cost recoveries and requires adjustments, grantees receiving awards should ensure that they understand the type of indirect cost rate applicable to the award. Types of indirect cost rates used on NSF awards are as follows:
 - 1. **Maximum Provisional Rate:** A maximum provisional rate is a temporary rate established for an award to permit funding and reporting of indirect costs pending establishment of a final rate (the rate determined at the end of an accounting period using "actual" direct and indirect cost data). This type of rate limits indirect cost recoveries to the lower of the maximum provisional rate established at the time of award, or the final rate established at the end of an accounting period. Grantees awarded maximum provisional rates are required to submit indirect cost proposals to the NSF Cost Analysis and Audit Resolution Branch within six months after the close of each fiscal year during which the award is active.
